PROFESSIONAL SUMMARY

Java Backend Engineer with **4 years** of experience designing and scaling backend systems and end-to-end web applications for fintech, lending, and SaaS platforms. Strong in **Java**, **Spring Boot**, **NodeJS**, **AWS** and **microservices**, backed by hands-on experience with **NestJS**, **React.js**, **REST APIs** and **PostgreSQL**. Proven record of architecting service-oriented systems, optimizing API performance (cut response times from **10s to 100ms**), reducing manual effort by **60-70%** through automated CRM and shipping production features from customer onboarding, KYC, underwriting, and loan processing. Experienced leading small engineering team and owning delivery across the full **SDLC** from business requirements to deployment and monitoring on production.

TECHNICAL SKILLS

Languages: Java 8+, Java 17, 21, JavaScript, TypeScript, SQL, Python

Backend and Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs, Microservices, Node.js, NestJS, Express.js, GraphQL, Event-Driven Architecture, Maven, Frappe, Strapi

Databases and Caching: PostgreSQL, MySQL, NoSQL, MongoDB, Redis, Query Optimization, Database Design, Indexing

Messaging and Asynchronous Processing: Apache Kafka, BullMQ, Webhooks, Job Queues

Cloud and DevOps: AWS (EC2, S3, CloudFront, Lambda, Amplify, VPC, CloudWatch), Docker, Kubernetes, Nginx, GitHub Actions, CI/CD, Cloudflare, Load Balancing, CDN, Grafana, Terraform

Frontend: React.js, Redux, Next.js, TanStack Query, TypeScript, HTML, CSS, Tailwind CSS, Material UI, React Native

Security and Auth: Spring Security, JWT, OAuth2, Authentication and Authorization, Multi-Factor Authentication (MFA)

AI & Automation: OpenAI, LangChain, LangGraph, RAG Workflows, FastAPI, Puppeteer, LLM Integrations

Practices: System Design, OOPS, Data Structure & Algorithm, Scalable Architecture, Performance Optimization, Microservices Design, Agile, Code Review, Leadership

PROFESSIONAL EXPERIENCE

Backend Engineer

Nov 2025 – Present

e-Solve Group | Fintech Debt Collection, Kolkata, IN

- Led a cross-functional backend and frontend team, owning architecture decisions and code reviews across fintech lending and debt-collection platforms.
- Designed a distributed backend where a **Spring Boot** background-verification **microservice** talks to a **NestJS** loan-servicing core over **REST** and **webhooks** with shared **JWT auth**. Both run on **PostgreSQL**, are containerized with **Docker** and deployed on **AWS EC2** and **Amplify**.
- Built **Tejas Field Force** from scratch a debt-collection platform and **React Native** app serving 3000+ field agents. It covers attendance, case allocation, GPS-tagged visits, collections and payouts, and replaced manual WhatsApp operations, cutting manual effort by **60–70%**.
- Built the **CKYC** service for **RinnCrest**, a digital lending platform. It fetches and validates customer KYC records from the Central KYC Registry (CERSAI) during loan onboarding, which removed repeated document collection.
- Integrated third-party fintech APIs across the loan lifecycle: **Decentro** (KYC/bank verification), **TransUnion CIBIL** and **Experian** (credit bureau checks), **Razorpay** (disbursements and repayments) and **DLT-compliant** 2FactorSMS. These were connected to a **Frappe**-based back-office admin (**Richard Tiecon**) for loan operations.
- Built a centralized admin dashboard tracking 40+ collection and portfolio metrics. Automated **MIS reporting** cut prep time from hours to under 10 minutes (~80%), and audit logs eliminated data-manipulation incidents.

- Developed multilingual **AI voice-bot** campaigns that trigger automated outbound calls across thousands of customer records, scaling outreach 10x beyond manual capacity.
- Built a **BullMQ**-backed bulk-upload pipeline that processes thousands of task records asynchronously. It geocodes addresses through an external API and writes results in batches to avoid request timeouts and reduce DB round-trips.
- Optimized **NestJS**/**PostgreSQL** APIs by removing N+1 queries, adding targeted indexes and **Redis** caching, using cursor pagination and tuning **TypeORM** relation loading, which reduced **p95** latency by 40%.

Software Developer *Sep 2024 – Jul 2025*

Innow8 Apps | IT Services | SAS Nagar Mohali, Punjab

- Developed backend services in **Java Spring Boot** and **NestJS** for Nisa Finance, a South African SME lending marketplace connecting businesses with finance providers. Delivered client-requested features to its SME and finance-provider portals.
- Built lending modules in **Spring Boot** for invoice discounting and purchase-order finance KYC and director verification, application processing, transaction and repayment management, and financial checks. These supported a fully online flow with credit decisions in 2 business days.
- Cut homepage API response time from **15 seconds to 50 ms** with a **Redis** and in-memory caching layer. Query optimization and a CDN on AWS CloudFront and Cloudflare improved overall application performance by **30%**.
- Streamlined SME underwriting by building secure Puppeteer-based scraping bots that extract bank-statement data from **FNB and Standard Bank**, replacing manual statement review.
- Migrated the full backend from Zen API to **Strapi v3**, moving data models, APIs and business logic with no disruption to live lending operations.
- Acted as the primary technical contact for the client gathered req, scoped feature requests & managed delivery timelines.
- Built 15+ reusable React.js components and dashboards, improving frontend load performance by ~25% through **lazy loading**, **memoization** and **code splitting**.

React Developer *Feb 2024 – May 2024*

Alpha Technologies Inc. | Mohali, Punjab

- Delivered full-stack features for production e-commerce and enterprise platforms (**Seal360**, **TCSK**), spanning backend APIs, authentication, and admin panels.
- Implemented **authentication, authorization, and Multi-Factor Authentication (MFA)** on a **JWT**-based security architecture.
- Integrated **20+ REST API endpoints** (GET, POST, PUT, DELETE) across contracts and core business modules.
- Collaborated with backend teams to integrate RESTful APIs and ensure smooth data flow.
- Strengthened data integrity with input validation and application-level security using **Yup** and **Crypto** libraries.

Associate Software Developer *Jan 2023 – Feb 2024*

BEGAWN IT Pvt. Ltd. | Mohali, Punjab

- Developed and enhanced user interfaces using **React.js**, **Tailwind CSS**, and Material UI and handled state management with **Redux** Toolkit.
- Implemented layouts, reusable components, and interactive features like modals, charts, and dynamic tables.
- Optimized React.js components with **memoization**, **lazy loading** and code-splitting, improving rendering speed by 30% and ensuring WCAG accessibility compliance for a seamless user experience.
- Shipped communication modules (WhatsApp broadcasting via **Plivo**, SMS, and bulk push notifications via **Firebase Admin SDK**) reaching thousands of users per campaign.

Software Engineer Intern *Jun 2022 – Nov 2022*

Newton School | Bengaluru, Karnataka, India

- Completed an intensive program in **data structures & algorithms and full-stack development** (Java, JavaScript, React, Node.js), building and shipping multiple full-stack projects that applied core CS fundamentals to real-world engineering problems.

EDUCATION

B.Tech – Computer Science Engineering Glocal University, Mirzapur Pole, UP, IN
