PROFESSIONAL SUMMARY

Full Stack Java Developer with **3.5+ years** of experience designing and scaling backend systems and end-to-end web applications for fintech, lending, and SaaS platforms. Strong in **Java, Spring Boot, REST APIs**, and **microservices**, backed by hands-on experience with **Node.js, NestJS, React.js**, and **PostgreSQL**. Proven record of architecting service-oriented systems, optimizing API performance (cut response times from **3s to 10ms**), reducing manual effort by **60-70%** through automation, and shipping production features across customer onboarding, **KYC**, underwriting, and loan processing. Experienced leading small engineering teams and owning delivery across the full **SDLC**, from requirements to deployment and monitoring.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL, Python (basic)

Backend and Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, REST APIs, Microservices, Node.js, NestJS, Express.js, GraphQL, Event-Driven Architecture

Frontend: React.js, Redux, Next.js, TanStack Query, HTML, CSS, Tailwind CSS, Material UI

Databases and Caching: PostgreSQL, MySQL, MongoDB, Redis, Query Optimization, Database Design, Indexing

Messaging and Async: Apache Kafka, BullMQ, Webhooks, Job Queues

Cloud and DevOps: AWS (EC2, S3, CloudFront, Lambda, Amplify, VPC), Docker, Nginx, GitHub Actions, CI/CD, Cloudflare, Load Balancing, CDN

Security and Auth: JWT, OAuth2, Authentication and Authorization, Multi-Factor Authentication (MFA)

Practices: System Design, Scalable Architecture, Performance Optimization, Microservices Design, Agile, Code Review, Team Leadership

AI and Automation: OpenAI, LangChain, LangGraph, RAG Workflows, FastAPI, Puppeteer, LLM Integrations, Workflow Automation

PROFESSIONAL EXPERIENCE

Backend Engineer (e-Solve Group | Fintech Debt Collection)

Nov 2025 – Present

- Led a cross-functional backend and frontend team, owning architecture decisions and code reviews across fintech and debt-collection platforms.
- Designed a **distributed backend** where a **Java Spring Boot** background-verification **microservice** integrates with a **NestJS** loan-servicing core over **REST + webhooks**, backed by **PostgreSQL** and secured with a shared JWT, containerized with **Docker** and deployed on **AWS EC2** (services) and **AWS Amplify** (web).
- Delivered **Tejas Field Force**, a debt-collection system serving **1000+ field agents** that replaced manual WhatsApp operations and reduced manual effort by **60-70%**.
- Consolidated collections, portfolio monitoring, and reporting into a centralized admin dashboard, giving managers a single view across **20+ key metrics**.
- Launched a **React-native** Mobile App, **real-time field tracking** (attendance, live location, visit history, collections, payouts) that raised visibility for **1000+ agents** and make an overall impact in business turnover.
- Automated **MIS** and portfolio reporting, cutting prep time by **nearly 50%** (hours to under 10 minutes), and added audit logs that eliminated data-manipulation incidents.
- Developed multilingual **AI voice-bot campaigns** that process thousands of customer records and trigger automated outbound calls, scaling outreach **10x** beyond manual capacity.
- Partnered with client teams and product owners across **15+ weekly syncs** to align metric definitions and sustain **reporting accuracy above 98%**.
- Built a bulk-upload module backed by **background jobs (BullMQ)** that asynchronously processes thousands of task records per upload, preventing request timeouts and keeping the UI responsive
- Optimized **NestJS/PostgreSQL** APIs by eliminating N+1 queries, adding targeted indexes, implementing **Redis** caching, cursor-based pagination, and eager/lazy-load tuning of TypeORM relations, reducing p95 response times by 40%.
- Integrated an external **geocoding API** within the upload module to derive **latitude/longitude** from task-file addresses, persisting results via **batched DB updates** to reduce database round-trips.

Software Developer (Innow8 Apps | IT Services / Fintech)

Sep 2024 – Jul 2025

- Designed **APIs and microservices** using **Java Spring Boot, Node.js, NestJS, MongoDB, and Python**, supporting high-volume financial processing for **fintech client** (Nisa Finance).
- Optimized homepage API response time **from 15 seconds to 6 milliseconds** through a **Redis** and in-memory caching layer.
- Accelerated overall application performance by **30%** via caching, CDN, optimized **database queries**, and backend tuning.
- Built lending modules for **KYC verification**, loan processing, transaction management, and financial verification.
- Streamlined underwriting with secure **Puppeteer-based** banking data-extraction bots for **2 banks** (FNB, Standard Bank), removing repetitive manual data entry.
- Migrated the backend from a legacy monolith to a scalable **service-oriented architecture**, boosting maintainability and feature-delivery speed.
- Deployed and managed cloud infrastructure on **AWS EC2, S3, CloudFront, Nginx, and Cloudflare** for high availability.
- Developed **15+ reusable React.js components** and dashboards, lifting frontend load performance by **nearly 25%** via lazy loading, memoization, and code splitting.

Associate Software Developer (BEGAWN IT Pvt. Ltd.)

Jan 2023 – Aug 2024

- Delivered full-stack features for production e-commerce and enterprise platforms (**Seal360, TCSK**), spanning backend APIs, authentication, and admin panels.
- Implemented **authentication, authorization, and Multi-Factor Authentication (MFA)** on a **JWT-based** security architecture.
- Integrated **20+ REST API endpoints** (GET, POST, PUT, DELETE) across contracts and core business modules.
- Strengthened data integrity with input validation and application-level security using **Yup** and **Crypto** libraries.
- Created user-activity, application, and error-logging systems that reduced debugging and issue-resolution time by **20%**.
- Shipped communication modules (WhatsApp broadcasting via **Plivo**, SMS, and bulk push notifications via **Firestore Admin SDK**) reaching thousands of users per campaign.

EDUCATION

B.Tech – Computer Science Engineering - Glocal University | 2015 – 2019
